The product idea

1)Problem statement

- Currently the facilities team keeps bookings on a paper sheet at the front desk, so it is impossible to know in advance which rooms are free, nobody can book ahead, and double-bookings happen constantly.

2)Objective

- To design a simple app where students can see which rooms are free for a time slot and reserve one, and where the facilities team can manage the rooms and see every booking.

3)Users

- **Students**:- A student can see the free rooms and book them
- **Managing staff**:- A managing team to manage the process

4)Functional Requirements

- The system must allow the student to make payment for the room the booked
- The system must allow the student to see free and booked rooms
- The system must allow the student to book a room
- The system must allow the managing staff to see the booked rooms
- The system must allow the managing staff to see which student has booked the room
- The system must allow the managing staff to mark a room free or booked
- The system must allow the managing staff to see the Id of all the student
